Rx Vantage Apptius Order Entry (AOE)

Reach higher levels of customer satisfaction and reduce demand on your call centre and administrative functions. The Apptius Order Entry system is a web-based application extending your pharmacy's order taking and information sharing capabilities to existing and prospective patients as well as affiliated sales and marketing organizations. Create quotations, place orders and view order status from anywhere, at anytime. Affiliated sales & marketing organizations can view on-line commission reports in real-time.

The Apptius Order Entry system is fully integrated to your central dispensing application thus eliminating hours of duplicate data entry and costly errors. Once the initial entry of the information is complete your organization has secure access to patient, order and drug pricing information from anywhere at anytime. View patient demographics, medical history, order history, refills available and any current orders in the system from one screen.

The Apptius Order Entry streamlines the ordering process for your organization. Functions include:

- *Order Entry* – provide e-commerce 'shopping cart' to your customers and affiliates
- *Drug Pricing* – is based on information drawn from your dispensing system. Pricing can be customized on an individual affiliate.
- *Order Review* – review orders for accuracy prior to submitting the order to the pharmacy.
- *Rx Dispatch* – route the Rx to the central pharmacy or to an international filling fill partner
- *Rx Review & Entry* – pharmacy personnel can edit, reject-with note, or approve an order.
- *Rx Fill* – Rx is automatically entered into the dispensing application for filling and label printing thus eliminating double entry to pass the Rx to your dispensing system.

- Grow your business by extending the reach of your organization with AOE
- Improve profitability through enhanced order placement and internal operational efficiencies
- Access international markets in a controlled manner designed to insure patient safety
